Abstract (en)

A cover profile (10) for covering an insulating strip (12) of a composite profile (100) for window, door, or facade elements extending in a longitudinal direction (z) is adapted to be attachable to the insulating strip before and removable from the insulating strip after coating of the composite profile and to withstand coating temperatures in a range from 120 °C to 230 °C. The cover profile comprises in a cross-section perpendicular to the longitudinal section (z) a base portion (16), a first cover portion (18) and a second cover portion (20) extending from the base portion to form the cover profile, the first cover portion having a first free end (18e) and the second cover portion having a second free end (20e) having a first distance in a neutral position and being resiliently displaceable in a transverse direction (y) perpendicular to the longitudinal direction (z) to clamp the insulating strip.
