Abstract (en)

[origin: EP2532826A1] The apparatus (10) has carriage (12) that is rotatably mounted with a mast (26) connected between upright operating position and inclined transport position. An erecting cylinder (40) is provided for pivoting of mast. A cable guide roller is arranged on one end of the mast and a carriage is arranged on another end of the mast. Erecting force is transmitted to the mast along the direction of upright operating position, when pulling force is applied on the carrier portion (76) over the cable guide roller. An independent claim is included for method for erecting mast.
