Abstract (en)  
[origin: EP2532940A2] The storage has releasably connected storage segments limited by cladding (3) and opposite non-pressure-stable or open end faces (4) for receiving permissible filling pressure. The segments are set together at the end faces, where outer end faces of the segments are terminated by filling pressure receiving constructions. The cladding of the segments is formed as a sandwich component that is made of material that is located between inner and outer walls. A thin-walled non-pressure-stable tight container is provided on the cladding and made of plastic material.
