Abstract (en)
[origin: WO2011098326A1] The invention relates to a method for maneuvering a yacht by means of a control organ designed as a joystick (7), wherein the joystick (7) is tilted in the direction of a longitudinal axis (y) and a transverse axis (x) of the yacht to initiate forward or reverse movements and transverse movements of the yacht and rotated to initiate yaw movements of the yacht around the longitudinal axis (zj) thereof, wherein the yacht (1) has a turning drive (6) designed as an individual drive having a thrust vector which can pivot around a vertical axis and wherein the control movements of the joystick (7) are logically transferred to the turning drive (6).
