Abstract (en)
[origin: WO2011009605A1] To produce a foam product which is stable over the long term, in particular as foam layer (20) in toilet bowls (11), it is proposed that the foam product contains 0.5 - 10% by weight, in particular 7 - 9% by weight, preferably 8% by weight, of a foam-stabilizing surfactant, 0.5 - 20% by weight, in particular 12 - 16% by weight, preferably 14% by weight, of a foaming cleaning-active substance, 0 - 5% by weight, in particular 0.5% by weight, of a foam stabilizer, 0 - 5% by weight, in particular 0.5% by weight, of pH-regulator, in particular citric acid monohydrate, and 70 - 90% by weight of water. The odour-inhibiting foam layer (20) formed by means of the foam product preferably remains stable in the toilet bowl (11) for at least 12 hours, in particular more than 24 hours.
