Abstract (en)  
[origin: WO2011113570A2] The invention relates to a securing assembly for a sliding door having at least two leaves that can be moved in opposite directions, comprising a carrier device for arrangement on the inner faces of the leaves and a covering strip for arrangement on the outer faces of the leaves, wherein the covering strip is held on the carrier device means of a connecting section passing through the gap between the leaves, and wherein the covering strip at least partially covers the gap between the leaves when the leaves are closed.
