Abstract (en)  
[origin: WO2011098747A2] A structural reinforcement device, the device comprising a frame having a longitudinal axis, at least a portion of the said longitudinal axis being generally arcuate, the frame comprising a plurality of laterally spaced longitudinal rods arranged generally parallel with each other and with the longitudinal axis of the frame, the longitudinal rods being linked together by one or more laterally extending linking member, the or each linking member being arranged to link the longitudinal rods together in an undulating manner to thereby form an upper plane in which at least a first of the longitudinal rods is situated and a lower plane in which at least a second of the longitudinal rods is situated.
