Abstract (en)

[origin: WO2011098502A1] Process of colour calibrating an electronic display screen comprising the steps of displaying at least one trial colour of at least one physical sample having standardized colour on an electronic display screen, visually comparing the colour of the at least one physical sample and the at least one trial colour displayed on the electronic display screen, selecting the trial colour having the best visual match with the at least one physical sample, and using the selected trial colour on the electronic display screen having the best visual match with the at least one physical sample colour to colour calibrate the electronic display screen.
