Abstract (en)

[origin: WO2011099863A1] A connection device for transformers, electronic drives and light connections in roofs or walls, including a house (1) in which the transformer/electronic driver/light connections (2) is attached, where wire connection devices (3) associated with the transformer primary (4) and secondary sides (5) are arranged at each end of the house (1), that wire connection devices on primary (4) and secondary sides (5) are protected by a lid (4,5), that wire connection devices (3) have insert holes (11) for the introduction of wires, that wire connection devices (3) ensures that the wires put into the insert hole (11), without having to open the wire connection device with a releasing arm (10), is firmly held in the wire connection device (3), and that the lids (4,5) functions as tension releavers when anchored to the house (1) in that the lids (4,5) and the house (1) have interior walls (28,29), which together will clamp the wires when the lids are anchored.
