Abstract (en)
[origin: EP2534989A2] The assembly (1) has a partially branched suction line system (3) connected to a suction unit (2) for guiding sucked dust from the suction unit. A terminal box (4) comprises a central terminal that is connected to the line system. A dust suction hose (8) extends from a suction tube (15) that is connected with the line system through the central terminal, where length of the suction tube is equal to length of the suction hose. The terminal box is connected with the suction tube for connecting the suction hose, where the suction tube is moved back and forth from the terminal box.
