Abstract (en)

[origin: EP2534991A2] The nozzle (10) has a movable agitator provided before inner air guiding edges (22, 24) in a moving direction of the nozzle. The agitator acts on a ground by movability. Outer air guiding edges are provided before the inner air guiding edges and the agitator. A suction port (12) is limited by the inner air guiding edges in the moving direction of nozzle. The agitator is designed as a pivotably movable lip and rollers (26, 28) i.e. bristle rollers, with radial retractions, which are distributed in a circumferential direction.
