Abstract (en)

[origin: EP2535294A1] The bag (1) has a side pleat (9) extending between a head portion (5) and a floor area (7) i.e. Finn, along a longitudinal direction. The side pleat is limited to front and rear walls (3, 4) by longitudinal seal seams (35, 36). Width of locking tab (17) is adapted to width of the side pleat, and the tap exhibits an edge consisting of first, second and third edge zones, which are arranged one above the other. The locking tab is fixed along an edge at an inner side by the second and third edge zones under a recess of a coherent region between the second and third edge zones. An independent claim is also included for a device for manufacturing a bag from a film.
