Abstract (en)  
[origin: EP2535493A2] The system (1) has a fixedly arranged drive device (2) whose driven element (3) is operatively connected to a rotatably mounted door leaf (7) via a sliding arm (4) and a guide element (11). The door leaf is formed as a frameless all-glass leaf with a disk, and the guide element surrounds an edge (12) of the disk of the door leaf and displaceable along the edge. The guide element includes a base body (14) and two guide arms, which surround the edge of the disk of the door leaf. The guide arms are made of a material with low friction coefficient. The base body is connected to the sliding arm. The driven element is designed as a driven shaft. The drive device is designed as a manual door closer.
