Abstract (en)
[origin: EP2535497A1] The system (40) has two actuators (50, 60) comprising motors (52, 62) for driving hinged jibs (56, 66) that are attached with opening frames (20, 30). A hollow box (42) accommodates the motors of the actuators. An electronic control board (48) is communicated with the actuators and configured to either dependently or independently control the actuators. An output shaft (54) of the motors and the hinged jibs extend out of the hollow box. The actuators are placed on two sides of the control board in the hollow box.
