Abstract (en)
[origin: WO2011101397A1] The invention relates to a combination (1) of control cabinet keys (2), wherein individual keys are arranged in the same plane but extending at a fixed angle (x) relative to each other and connected via a common center part (4, 5). Due to the fixed connection between each other during handling, a moment must be applied to a key (2) that is used. For the purpose of favorable handling, a first unit (E1) and a second unit (E2) of keys extending at a fixed angle (x) relative to one another are provided, all units (E1, E2) comprise a dedicated center part, and the units are detachably connected at the center parts (4, 5) thereof and/or the keys can be rotated relative to one another, but only in a respective predefined plane.
