Abstract (en)
[origin: DE102010008712A1] The hinge has a rear flap-sided hinge part (10) and a body-sided hinge part (12) articulately connected with one another. A stopper mechanism (50) has plastic stopper elements (52, 56), which are in effective contact with each other for limitation of mutual misalignment of the hinge parts in an end position of the hinge. The stopper elements have brake surfaces, where one of the movable stopper elements is frictionally engaged in the end position of the hinge by the other firmly standing stopper element. A torsion spring drive (38) is provided with a torsion spring (40).
