Abstract (en)

[origin: WO2011101135A1] The invention relates to a method for handling patient data stored in a storage device (11) of a medical treatment device (100), consisting of the following steps: medical data is transferred from the storage device (11) of the medical treatment device (100) to a first external electronic storage medium or to a second external electronic storage medium, respectively at a second point in time; after which the transferred medical data had already been transferred at least once from the storage device (11) of the medical treatment device (100) to the first external electronic storage medium, at a first point in time which is before the second point in time. The invention also relates to a medical treatment device, a computer-readable storage medium, a digital storage medium, a computer-program product and a computer-program.
