Abstract (en)

[origin: EP2537567A1] The board has a zone comprising a recess (2) formed in a structure of the board, where the recess opens on lower and upper faces of the board. The recess is partially sealed by a flexible material layer that is pierced with a deformable opening i.e. cut-out. The deformable opening is formed by a slot realized in the flexible material layer. The recess is located in a zone of front spatula (3) and/or heel. The flexible material layer is placed near the upper face of the board, and is formed by an upper protection layer extending on the upper face of the board.
