Abstract (en)
[origin: EP2537668A2] The baling press (1) has a pressing chamber (2), in which the compaction of the bulk materials to bales is carried out, where a feed chute (3) is opened upwards, particularly opposite to the direction of the gravity (S). A lifting-or tilting unit is designed to move the container (5) from the coupling position into the releasing position by swiveling around a pivot axis (A). A holding unit is provided for coupling and decoupling the container, where the holding unit is provided with an insert holder.
