Abstract (en)
The disclosed fluid storage container comprises a container body (6) provided with an interior space for storing fluids and an opening (6b) for guiding the aforementioned fluid from the aforementioned interior space to the outside, and a lid which covers the above opening (6b) of said container (6) and is provided with a discharge opening (7) for the aforementioned fluid. The above discharge opening (7) is configured so that the discharge opening (7) is normally in a closed state, sealed by a plug (3), but is set to an open state when extracting the fluid from the container. Thus, outside air and impurities are prevented from entering the container, which prevents the degradation of the contents of the container, and thereby drastically increases the lifespan of the contents.
