Abstract (en)
The inventor relates to a device for attaching removable containers, comprising a central body on both sides of which the containers are arranged in a matricial form. Independent fixing means are provided between the central body (5) and each container (1), said fixing means comprising a flap that projects laterally from the central body (5) and has an essentially U-shaped profile that can be coupled to a hinge (4) forming part of an upper cover (2) - lower ring (3) set provided on the container (1), by being pressed downwards over said hinge.
