Abstract (en)

[origin: DE102009056822B3] The power transmission has a driving motor (1) generating heat flow, and a damp motor (10) provided in a damp circuit (6). An evaporator (5) is arranged in the damp circuit, and a part of the heat flow is charged to vaporize a working medium. The evaporator includes an inlet for liquid working medium and an outlet for vaporous working medium. The evaporator includes a bypass outlet (8) over which the part of the heat flow is introduced in the evaporator by the inlet, and is discharged to the heat flow working medium, before the residual working medium is evaporated in the evaporator.
