Abstract (en)

[origin: WO2011104256A2] The invention relates to a system for operating an LED-based light source (2) which system comprises an operating device (20) that is designed to transform the input-side mains voltage to a supply voltage, and a control unit (30) for the light source (2), which control unit is connected to the operating device (20) and operates the LEDs (5) using the supply voltage obtained from the operating device (20). The control unit (30) is arranged in a module which is designed as a unit separate from the light source (5) and which is connected thereto by means of a preferably flexible cable (31).
