Abstract (en)
[origin: WO2011101047A1] The invention relates to a stove having a combustion chamber and an inlet opening, which inlet opening can be closed by a door, where guiding means (6, 7, 8, 9) forces a leading edge (11) of the door (2) in an outgoing direction relative to the stove (1) followed by a movement along an outer side of the stove (1). Further the door (2) can be provided with at least one pair of axle pins (6, 7), which axle pins (6, 7) cooperate with at least one or more guiding slots or grooves (8, 9) provided in one or more substantially horizontal positioned plates (5) in the stove (1). The stove (1) can alternatively be provided with one or more rims substituting the plate(s) (5).
