Abstract (en)  
[origin: WO2012149985A1] The invention relates to an electric connecting element for making contact with a conductive structure located on a flat substrate by means of a thermally material-bonding connecting material, wherein means for fixing a preferably flexible conductor are arranged on the side of said connecting element facing away from the conductive structure, wherein, according to the invention, the connecting element is formed as a solder tag which has a single or laterally multiple circular ring shape.
