Abstract (en)

[origin: WO2011104193A1] The invention relates to a method for identifying a video program received by a user (UE) by identifying an audio sequence contained in said video program, that comprises: receiving (1-6) a plurality of reference audio sequences and receiving, for each of said sequences, a signature and a reference audio signature identifier; preselecting (8) a series of reference audio signature identifiers; and correlating (9) the signatures corresponding respectively to said preselected identifiers with a signature representing an audio sequence contained in the video program received by the user, and selecting from said preselected identifiers the identifier that has the strongest correlation for identifying an audio sequence and thereby identifying the video program received by the user. The method further comprises, for preselecting a series of reference audio signature identifiers, taking into account the information describing in particular the video program received by the user and provided by a program guide broadcasted in parallel with the video program to be identified.
