Abstract (en)

[origin: CN102851823A] The device (1) has a frame for arranging in web shafts of a loom, where the frame comprises a pair of needles (60) pivotably supported around a longitudinal axis. A vane drive (20) pivots the needle pair and comprises a carrier with permanent magnets by forming an air gap. The magnets are arranged one above the other at a distance to each other. A motion element (25) is pivotably arranged in an axle of the frame with a head in the air gap. An end of the motion element stands in connection with the needle pair and arranged opposite to the head. The head is made of magnetizable material.
