Abstract (en)

[origin: EP2540946A2] The device (1) has a drive housing (3) mounted in a frame profile (2) by a spring element (4) and plate springs and moved relative to the frame profile using a drive e.g. chain drive and spindle drive. A sensor (6) i.e. strain gauge, detects wind loads and movement of the housing relative to the frame profile. The frame profile is designed as a part of a blind frame or a wing frame. The spring element is made of U-shaped bent sheet metal and supports the housing in two directions. The spring element comprises two legs, and the housing is connected with the spring element over a connector.
