Abstract (en)

[origin: EP2541071A2] The arrangement has a pressure connection (P) connected with a pressure supply, and a tank connection (T) connected with a return pipe. Two load connections (A, B) are connected with hydraulic loads (11), and separate valves (1-4) e.g. 3/3-way valves, control the connection of the load connections with the pressure connection and the tank connection. Another separate valve e.g. 2/2-way valve, connects the pressure and tank connections. The separate valve is closed when the connection between one of the load connections and the pressure connection is opened. The hydraulic loads are formed as hydraulic cylinder or hydraulic motor. An independent claim is also included for a method for operating a hydraulic system.
