Abstract (en)
[origin: EP2541686A1] The shielding terminal (1) has a pressure unit (2) that is movably supported between two legs (11,12) of a U-shaped bracket (10). An elastic element (3) is arranged between two legs such that pressure force is exerted on pressure unit. A closing device (30) is arranged on U-shaped bracket in a displaceable manner. The closing device and U-shaped bracket are movable toward one another in a movement direction (50) extending orthogonally to pressure force (F). A shield bar is clamped between open end (14) of bracket and closing device.
