Abstract (en)  
[origin: WO2011109725A2] Methods and systems for aiding with dynamic compression of venous tissue enable improved blood movement, reducing edema, reducing leg cramping, treating plantar fasciitis in the extremities, and/or the like. In an exemplary embodiment, a therapy shoe entirely contains a therapy device which provides a compressive force to the venous plexus region of the foot. The system may assist blood circulation which may reduce the occurrence of undesirable complications such as deep vein thrombosis, ulcers, and the like.
