Abstract (en)
[origin: WO2011108966A1] This invention relates to a seating arrangement including at least two seating units connected together, wherein each seating unit includes a tubular frame and a seat supported by the tubular frame. The invention also relates separately to a seating unit forming part of the seating arrangement. The seating arrangement according to this invention is characterised in that each tubular frame defines a loop (5) projecting beyond one side of the seat (12), that the seat (12) is provided on the opposite side with an opening (21) and a retaining means (24) associated with the opening (21) and that the loop (5) of one seating unit is designed to engage with the retaining means (24) of an adjacent seating unit. The seating unit situated at one end of the row of seating units connected together is provided with a special support for its connecting means.
