Abstract (en)
[origin: WO2011107539A1] A lifting device for a concrete pipe comprising first and second opposing load engaging members arranged for movement towards and away from each other to grip a portion of said pipe therebetween, wherein said first and second load engaging members are adapted to be urged towards one another under the weight a pipe held therebetween. Preferably said first and second load engaging members are adapted to be located on either side of a wall section of the pipe at or adjacent an end of the pipe.
