Abstract (en)  
[origin: WO2011107083A2] The invention relates to a device for the situation-dependent authorised admission or access to any casing, in addition to the protection of said casing against misuse of the content. Said device comprises at least one opening/closing mechanism (1) and at least one locking/unlocking mechanism (2) which can be engaged or disengaged and/or actuated by the opening/closing mechanism (1). Said invention is characterised by the fact that in the access area of one or more locking/unlocking mechanisms (2), the casing is provided with at least one barrier (3) which can be overridden by means of at least one mechanical and/or electromechanical protector or covering which can be actuated manually, the irreversible deformation/destruction of said barrier nonetheless providing access to a locking/unlocking mechanism (2).
