Abstract (en)

[origin: WO2011107566A1] The invention relates to a system for determining treatment-related data for the administration of at least one drug to a patient to be treated, comprising at least one drawing device for continuously and successively drawing blood samples from the patient in order to obtain a plurality of blood samples, at least one, preferably a plurality of, blood value measuring devices for measuring blood values of the blood samples drawn and for obtaining blood value measurement data sets, and at least one calculation device for calculating treatment-related data from the blood value measurement data sets and optionally further data sets.
