Abstract (en)

[origin: WO2011107375A1] A drive arrangement of a circuit breaker has a pivotable drive lever (17). The pivotable driver lever (17) interacts with a blocking element (14), the blocking element (14) having a first blocking region (27), which can move into a pivoting region of the drive lever (17), and a first release region (28). Furthermore, a second release region (30) and a second blocking region (31) can be arranged on the blocking element (14), said release region and blocking region interacting with a pivotable pivoting lever (13) of a further switching device.
