Abstract (en)
[origin: WO2011108015A1] A transportable satellite antenna (1) has an openable case (2), and a parabolic disk (23 parabolic dish), defined by a plurality of disk portions (24, 25, 26) fixed to one another and carried by a structure (21), which is coupled to an internal portion (18) of the case (2) via an azimuth-adjustment device (32) and an elevation-adjustment device (40); the antenna (1) has a feeder (55) carried by an arm (56), which is coupled to the structure (21) and can be turned over between a extended position and a folded position about a horizontal axis (64).
