Abstract (en)

A package comprises a container (1) and a closure film (20) for closing the container (1), the container (1) comprising a first containing cavity (2) and a second containing cavity (3), a separating element (7) being provided for separating the first containing cavity (2) from the second containing cavity (3), the closure film (20) being detached from the separating element (7) at least along a portion of an edge (8) of the separating element (7). A protruding element (13) projects from the edge (8) of the separating element (7), the protruding element (13) being in contact with the closure film (20) for keeping the closure film (20) distanced from the edge (8) at least in a region of the edge (8) adjacent to the protruding element (13).
