Abstract (en)

The device has a covering element (3) whose opening allows an actuation key (9) to actuate a bolt (7) by swiveling the key in a plane perpendicular to a plane of the covering element. The bolt includes a crossing opening in which an end (13) of the key is introduced when the key is introduced into the opening of the covering element. The opening of the covering element is formed to guide a passage of the key through the covering element and introduction of the end of the key into the crossing opening of the bolt before the actuation of the bolt by swiveling the key.

Abstract (fr)

La présente invention concerne un dispositif de verrouillage et de déverrouillage d'au moins un élément de recouvrement sur un cadre de support de cet élément. Selon l'invention, l'ouverture (10) de l'élément de recouvrement (3) est conformée pour permettre à la clef (9) d'actionner le pêne (7) par pivotement d'elle-même dans un plan perpendiculaire au plan de l'élément de recouvrement (3). L'invention trouve application dans les équipements de voirie.
