Abstract (en)
[origin: WO2011112079A1] Haymaking device (1), comprising a frame with a main beam (2) which extends in a longitudinal direction and defines a longitudinal centre line (S), and two side arms (4a, b) extending sidewardly on both sides of the main beam (2), wherein the side arms (4a, b) each carry at least one crop processing tool which is driven in a rotating manner, wherein the crop processing tools are each provided with a drive for the rotation thereof, which drive comprises a drive shaft which extends between a first end at the main beam (2) and a second end in transverse direction at a distance therefrom, wherein the first end is in operative connection with a first transmission to which a main drive shaft (51) extending along the main beam (2) is operatively connected, wherein the first transmission is movable in a vertical plane which contains the longitudinal centre line (S)
