Abstract (en)
[origin: WO2011110403A1] The present invention relates to a hair iron (1), in particular a straightener, having two arms (2, 3) which are mounted one on the other such that they can pivot, wherein an ironing plate (4, 5) is arranged on each of the two arms (2, 3), it being possible for at least one of said ironing plates to be heated. In this case, it is essential to the invention that at least one of the ironing plates (4, 5) is mounted in a spring-elastic manner by means of a spring device (6), and that the spring device (6) has a constant spring characteristic in a predefined region (D), so that a preferably constant compressive force (F) can be exerted on the hair (8) when the hair iron (1) is used.
