Abstract (en)

[origin: WO2011109914A1] The hanging apparatus for displaying articles initially comprises a grid arrangement (1) which has a large number of systematically arranged cells (10) which are each surrounded by two horizontal webs (11) and two vertical webs (12), wherein the cells (10) are open to a front face (18) and to a rear face (19). The hanging apparatus also has a primary support (2, 2') which has at least one plug part (21, 21') which is intended to be detachably suspended in a selected cell (10). The plug part (21, 21') has a hook contour (214, 214') which points upward and, in the suspended state, engages behind the horizontal web (11) which bounds the selected cell (10) at the top. The plug part (21, 21') has a lower stop (217, 217') which, in the suspended state, is supported on the horizontal web (11) which bounds the selected cell (10) at the bottom. The plug part (21, 21') has at least one sheet-like flank (211, 211') with a front edge (212, 212') which merges with the hook contour (214, 214') at the top. The lower stop (217, 217') is provided on a lower face of the flank (211, 211'). The at least one flank (211, 211') of a primary support (2, 2') which is fitted from the front face (18) of the grid arrangement (1) can be suspended in the selected cell (10) and the at least one flank (211, 211') of a primary support (2, 2') which is fitted from the rear face (19) can be suspended at the same time.
