Abstract (en)

[origin: WO2011110427A1] In order to make available a device (12) for limiting a pitching movement between a bogie (3) of a rail vehicle (1) and a wagon body (2) which is supported on the bogie (3) with a stop (13) which can be attached to the bogie (3) or to the wagon body (2) and a corresponding stop (14) which can be attached to the wagon body (2) or to the bogie (3), wherein the stop (13) forms a stop surface which faces the corresponding stop (14) and enters into contact with the corresponding stop (14) during operation of the device (12), with which device the usable installation space of the rail vehicle can be enlarged, it is proposed that the corresponding stop (14) be configured in the form of a connecting link in a side view.
