Abstract (en)  
[origin: WO2011110355A1] A container (1) for receiving foodstuff or dried beverages comprising a surrounding container wall (2), an upper container opening (4) and a bottom part (5) opposite to the container opening and connected to a lower end section of the container wall, wherein the bottom part includes an essentially flat bottom section (7) and an abutment flange (9) which protrudes at least in some locations from the bottom section in the direction of the container opening, and the lower end section of the container wall includes a support ring protruding radially inwards from the end section. The bottom part and the lower end section is connected between the abutment flange, an inner side of the container wall, and between the lower side of the bottom section and an upper side of the support ring.
