Abstract (en)
[origin: WO2011110335A1] The invention relates to a method for preprocessing and, as a whole, providing data and information relating to an automation system, in particular in visual form, wherein temporally variable first data and temporally invariable second data are acquired using at least one standardized interface, and the acquired first data and the acquired second data are read in via at least one standardized interface, are preprocessed and are displayed as a whole, in particular are displayed together, and are provided. Also included is a corresponding system for carrying out the method, wherein at least one data processing device which, in interaction with at least one standardized interface, acquires temporally variable first data and temporally invariable second data is used to read in the acquired first data and the acquired second data via at least one standardized interface, to process, in particular preprocess, said data and to reproduce said data as a whole, in particular together, on a display device, in a manner displayed as a whole, in a view and/or to provide said data via at least one output device for retrieval and for further use and for operating a technical installation.
