Abstract (en)

[origin: WO2011110693A2] The invention relates to a connecting block for fastening two neighboring frames of photovoltaic modules or collector modules to a DIN mounting rail, wherein the connecting block comprises a main body and two pins which project from two surfaces of the main body pointing in opposite directions. Each pin can be inserted in one of the neighboring frames. The connecting block further comprises a transverse piece projecting from the main body, said piece having a counter-profile that is adapted to the profile of the DIN mounting rail in order to establish a positive connection with the DIN mounting rail.
