Abstract (en)

[origin: WO2011110232A1] The invention relates to a housing base element for a multi-part housing for an electrical appliance. The housing base element consists of a frame element and at least one plug element which is integrated in the frame element and is formed integrally with the frame element. The connecting area between the at least one plug element and the frame element is in the form of a weak point. During the course of assembly of the housing base element, the plug element is mechanically separated from the frame element, as a result of which the plug element and the frame element are decoupled.
