Abstract (en)

Provided is a suspension-body supporting device for an elevator configured in such a manner that a plurality of lateral members provided vertically at a distance from each other are mounted to a guide rail for guiding a body to be raised and lowered. Longitudinal members are attached between the plurality of lateral members. At least one of a suspension body for suspending the body to be raised and lowered and a suspension body suspended in a hoistway is supported by at least one of the plurality of lateral members.
