Abstract (en)
[origin: EP2546404A2] The present invention relates to a clothes horse, and more particularly, to a clothes horse being able to hang out the laundry without bending a back of a user by including a prop where a washing basket lies. A clothes horse according to the present invention includes a supporting mean, a hanging mean, an angle control mean, and a prop. The support mean includes a pair of legs crossing each other. The pair of legs are rotatably coupled to each other at a crossed portion of the pair of legs. The hanging mean includes a pair of hangers where laundry is hang out. The pair of hangers are pivotably coupled to upper ends of the pair of legs, respectively. The angle control mean supports the hangers and adjusts a rotation angle. The prop mounted between the pair of legs at an upper portion of the crossed portion. A clothes horse according to the present invention includes a prop between a pair of legs crossing each other, and thus, a washing basket can lie on the prop. Therefore, a user can take a laundry out of a washing basket without bending his or her back and can hang out the laundry on the clothes horse. Accordingly, the user does not repeat unnecessary bending and straightening the back.
