Abstract (en)

[origin: EP2546406A2] The method involves applying a handling unit on a textile goods (2) that is dried on heating cylinders (4, 5). The textile goods is loaded with an air flow and rested on the heating cylinders, where the textile goods is guided across a deflection device (6) i.e. air-jet deflection device, before reaching the heating cylinders so as to contactlessly actuate the textile goods and indicate a non-adhesive surface of the textile goods, and allow the textile goods to be kept at moderate temperature. The air flow is directed in an input region tangential to the heating cylinders. An independent claim is also included for a device for treating a textile goods.
